## Magazine Christmas Tree

A great alternative way to create an inexpensive tree as well as recycling!

Tools and Materials:

- Magazine or Catalogue
- Patience!
- Sellotape: you may or may not end up using this but it is good to secure the outside pages to each other to get a better shape tree

Fold the magazine page down toward you like a triangle

Then fold it again as if you were making a paper airplane

Tuck the excess at the end into the slot between the two triangles so you get a straight edge like so

Keep folding every page like so - helps if you have some great Christmas music on to get you in the mood!

You can always take a break if your hands get tired from all the folding! But it will be worth it in the end!

And there you have it your very own
