

Neon Silhouettes

Creating simple stencils you can make colourful Neon Silhouettes blending chalk pastels like above

Tools and Materials:

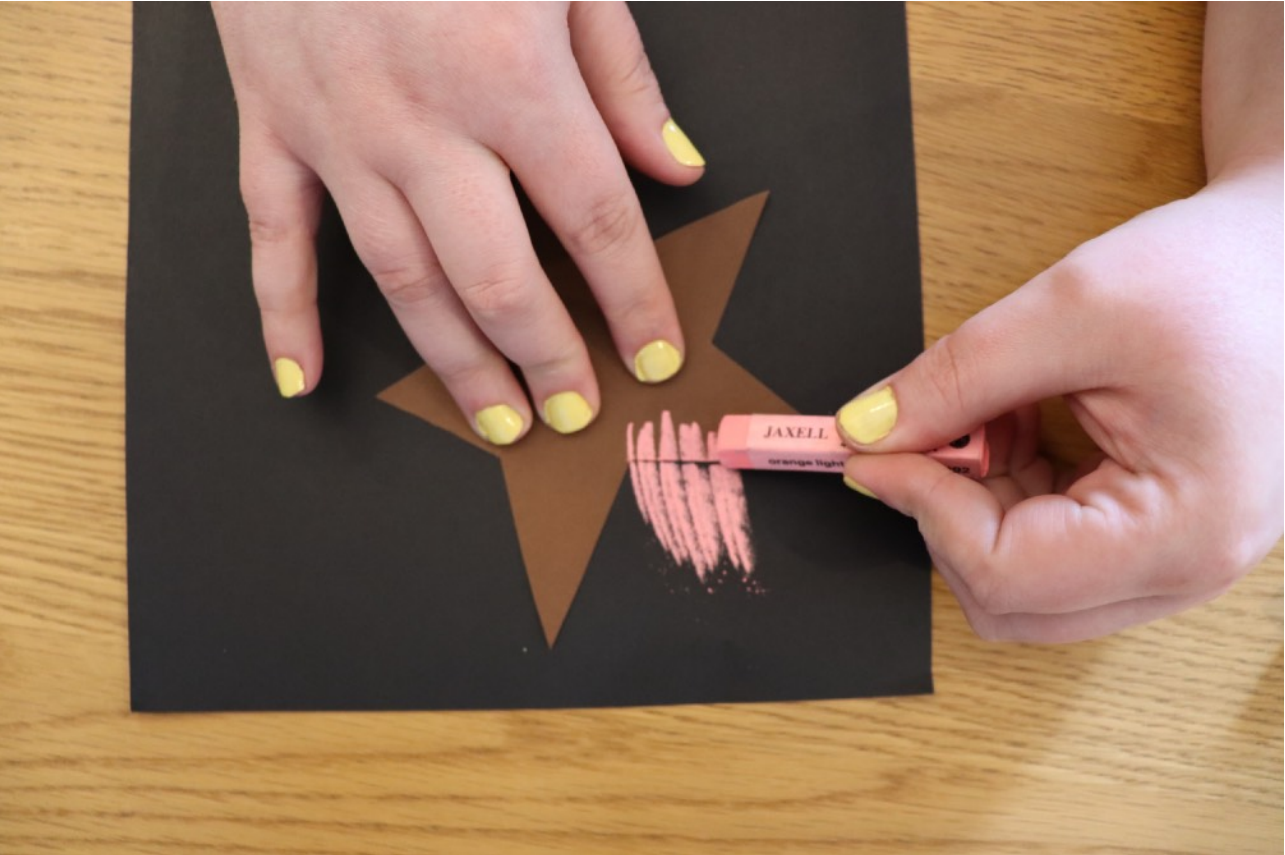

- Black Paper
- Scrap Paper
- Chalk Pastels
- Pencil
- Scissors
- Hairspray can be used to stop it from smudging, ask an adult to help!

Using the brown paper you can create your stencils - any paper will do for this just helps to have a colour where you can see the pencil lines drawn, we don't recommend black as it is harder to see your drawn lines. Sketch then cut them out like so

Lay the stencils out on your black paper how you like them to be, holding them down with the hand you don't draw with start layering the chalk pastel radiating out from the stencil across the paper

It should end up looking like so

Once you are happy with the colour keeping hold of the stencil you can start to blend it with your fingers like so

If you are using hairspray now is the time to “fix” the drawing by spraying it lightly over the whole surface of the paper. If you aren't using it then try not to touch it too much

There you have it your very own “Neon Silhouette”!
