

Perpetual Calendar

Why not create your own perpetual calendar you can change the day and date - creating a new theme each year you can even reuse the days and numbers!

Tools and Materials:

- 3 Sheets A4 White Paper
- Pencil
- Gluestick
- Scissors
- Felt Tips
- Bluetack

Taking one piece of paper fold it in half, then in half again and then again this will create 8 rectangles - we need 12 for each month so you can repeat with half of another bit of paper folded in half and half again to get your other 4

You can use the leftover half of the whole piece of paper as the base for your calendar, think about what theme you want for your different months and start sketching them out

When you are happy with your months then colour them in

Start sticking them to the base starting with Dec and working back through the months so January is the first one, try and glue just a small margin so when you rip it off the image below is visible

At the bottom of the calendar with need to create a small pouch to keep the days and dates in, fold it like so - big enough to keep them in but not so big there isn't space to display day and date as needed, just glue the sides like so

Now to create the days and dates - take a bit of paper and start writing them out, they need to fit the pouch so use that as a guide for size

Choose the day and date and use bluetack to stick them on so you can easily change and reuse them, put the others you don't need in the pouch

There you have it your very own "Perpetual Calendar"!
